

Doc GenAI

A synthesis of MS-CISBA Curricula

Introduction

Problem

Extracting meaningful insights from an array of documents.

Project Goal

Develop a GenAI chatbot that can understand and respond to natural language queries.

Key Features

- Process documents
- Natural language processing & response generation
- Information retrieval and summarization

Technical Implementation

Software Systems

- Streamlit frontend
- Python backend

Business Analytics

- Sentiment Analysis, text summarization
- NLP

Data Management

- Document storage in cloud-based storage
- Data security using encryption and authentication

Cybersecurity & Networking

- Mitigate prompt engineering
- Secure data handling

Live showcase including:

- Document upload
- Query input
- Response generation with impactful insights
- Document summarization

Future Directions

1. Use enhanced LLMs for improved performance
2. Advanced document and formats understanding
3. Improved User Experience
4. Scalability and Deployment

Conclusion

Key Features

Document upload, query answering, summarization, insight extraction

Impact

Assists in efficient document analysis, decision-making, and knowledge discovery.

Future Work

Advanced language models, enhanced document understanding, improved user experience, and scalable deployment.
